PROFESSIONAL SUMMARY

I am a results-driven Security Engineer passionate about transforming theoretical knowledge into practical, impactful solutions. With hands-on experience in cloud security, vulnerability management, and product security. I focus on building resilient systems across AWS and Azure environments. I specialize in embedding security throughout the software development lifecycle, aligning technical controls with global compliance standards such as GDPR, ISO 27001, and AML/KYC. Driven by a passion for technology and problem-solving, I thrive on delivering secure, scalable solutions that address real-world challenges and reduce organizational risk.

EDUCATION

Wellspring College	Ikeja, Lagos
West African Senior School Certificate	2012-2018
Caritas University	Enugu, Nigeria
BSE Computer Engineering	2018-2023

EXPERIENCE

Technology and X – USA(Hybrid)	January 2025 -
Security Engineer	
- Led cross-jurisdictional research and compliance mapping on statutory data retention laws across Europe, America and Africa, supporting GDPR and AML/KYC alignment for one of Africa’s top fintechs operating in over 20 countries. Delivered actionable insights to guide secure data lifecycle management across diverse regulatory landscapes. - Performed comprehensive risk assessments on critical cloud assets for a leading African fintech, identifying vulnerabilities and implementing mitigation strategies that reduced overall risk exposure by 85%, aligned with organizational risk appetite and regulatory requirements. - Participated in a Governance, Risk, and Compliance (GRC) transformation project, streamlining policies, risk assessment workflows, and compliance frameworks to improve security posture, regulatory alignment, and audit readiness. - Developed a risk management system for a leading African fintech by leveraging Google Apps Script and Google Suite (Sheets, Forms), automating risk data collection, analysis, and reporting to support enhanced decision-making and compliance tracking. - Assessed and identified gaps in Identity and Access Management (IAM) processes for a client, optimized and reengineered workflows, and implemented automation solutions where applicable to enhance security controls and operational efficiency. - Served as the primary facilitator for security awareness and training programs for client organizations, promoting a culture of cybersecurity awareness and ensuring adherence to industry best practices and compliance requirements. - Developed and reviewed security-related organizational policies to ensure alignment with industry regulations and client requirements. - Conducted thorough penetration testing and vulnerability assessments for client products, identifying critical vulnerabilities and delivering actionable mitigation recommendations to strengthen system defenses. - Developed comprehensive remediation roadmaps that prioritized vulnerabilities based on risk severity and provided actionable, strategic recommendations for effective mitigation. - Developed and documented product security baselines & policies to improve and standardize security across products for various clients.	
Technology and X – USA(Hybrid)	July 2024 - December 2024
Information Security Analyst	
- Conducted threat detection and incident triage in active Security Operations Center (SOC) environments, improving response time and reducing alert fatigue. - Provided technical support for software development activities, collaborating with development teams to ensure secure coding practices and integration of security controls throughout the software development lifecycle (SDLC). - Managed and optimized security tools, ensuring peak performance, robust configurations, and strict alignment with client security standards and requirements. - Served as the primary facilitator for security awareness and training programs for client organizations, promoting a culture of cybersecurity awareness and ensuring adherence to industry best practices and compliance requirements. - Oversaw the development and review of security-related organizational policies to ensure alignment with industry regulations and client requirements. - Led client engagements on remediation efforts for identified security gaps and vulnerabilities, leading to a 100% closure rate of critical and high-risk vulnerabilities.	

Industrial Training (SIWES)

- Generate and spool data usage, CDR (Call Detail Record), subscription records of MTN users based on request.
- Profiled and optimized queries to ensure optimal performance in a heavily utilized UNIX/Oracle production environment.
- Troubleshoot defects and performance issues, before deploring solution.
- Monitor analytics and metrics results using oracle SQL developer and UNIX to generate process dates.
- Responsible for the efficient processing and loading of transactional data received in batch files.
- Proficiently managed file task setup, including registration and execution, for files undergoing system upload, ensuring seamless processing of both successful and failed loads.
- Performed manual file pushes, ensuring timely and accurate processing of data within the system.
- Investigated system issues and implemented resolutions to reduce downtime.
- Managed the process of updating transaction dates from previous day file loading, ensuring accuracy and timely completion.

CERTIFICATIONS

- [AWS Solutions Architect Associate](#), 2025.
- [CompTIA Security +](#), 2024.
- Palo Alto SOC Fundamentals, 2024.
- John Hopkins University (HTML, CSS, JavaScript), Coursera (**98.60%**), 2022.

PROJECTS

- GRC Transformation Project: Collaborated on a GRC transformation initiative that redefined internal risk and compliance workflows using Drata and custom risk assessment frameworks. Streamlined policy documentation, automated audit readiness processes, and improved the client’s overall security posture through enhanced governance controls and continuous compliance monitoring.
- ISO27001 Implementation: Participated in active SOC operations, triaging incidents and refining detection rules to improve alert fidelity. Helped reduce incident response times and alleviate analyst fatigue by implementing smarter threat detection protocols.
- Security Operations and Threat Detection Optimization: Participated in active SOC operations, triaging security incidents and refining detection rules to improve alert fidelity. Helped reduce incident response times and alleviate analyst fatigue by implementing smarter threat detection protocols using theHive, and Wazuh for real-time monitoring, alert correlation, and incident analysis.
- End-to-End Penetration Testing & Vulnerability Management: Conducted in-depth penetration testing and vulnerability assessments for client environments. Discovered and documented critical security flaws and delivered actionable remediation roadmaps prioritized by business impact and risk severity.
- IAM Optimization and Workflow Reengineering: Audited and optimized IAM processes for a leading fintech company using automated access management workflows and policy-based controls. Streamlined access provisioning, enforced compliance through automation, and significantly improved the organization’s overall security posture.
- Automated Risk Management System: Designed and implemented a fully automated risk register using Google Apps Script integrated with Google Sheets to streamline enterprise risk management workflows. The system:
 - Automatically calculates due dates based on selected impact levels.
 - Tracks overdue risks and shows the number of days past due.
 - Maintains a full audit trail, capturing who modified each entry and when.
 - Sends automated email alerts to risk owners upon assignment and for overdue items.

VOLUNTEER EXPERIENCE

Graphic designer at Avantgarde Foundation (Formerly Innovative Youth Society)

Utilized graphic design tools and creative concepts to effectively communicate the foundation’s mission, increase visibility, and drive community engagement.

Lagos, Nigeria
July 2022 – January 2023

SKILLS SUMMARY

Technical Skills

Web & Mobile App Penetration Testing, Vulnerability Management, Identity and Access Management, Government, Risk & Compliance, Attack Surface Reduction, Infrastructure & Network Security, Cyber Threat Intelligence.

Soft Skills

Time management, Team player, Problem solving, Adaptability, Pressure-resilient.

Security Tools

Burp Suite, AWS Security, Sentinel One, CrowdStrike, Tenable, Drata, Wiz, Wazuh, Microsoft Sentinel, Jumpcloud, Palo Alto, Kali Linux Tools.
